

TEST PLAN

Title: Test Plan for Sauce-Demo (Swag Labs) Web Application

Document Information:

Version: 2.0 (Advanced)

Prepared By: ARSLAN SAJID KHAN

Date: 15/01/2026

Project Name: Sauce-Demo Manual Testing

URLs: <https://www.saucedemo.com/>

Introduction: Sauce-Demo is a demo e-commerce website used for learning automation and manual testing. It simulates a sauce products store with login, product listing, cart, and checkout functionality.

Description: This Test Plan describes the testing approach for the Sauce-Demo web application. Sauce-Demo is a sample e-commerce website used for practicing manual and automation testing. The purpose of this testing is to ensure that all functionalities such as login, product selection, cart management, and checkout work correctly.

Objective: The main objective of this testing is to identify bugs, verify functional requirements, and ensure smooth user experience across all modules of the application.

- Validate all positive and negative functional flows
- Identify security vulnerabilities (URL manipulation, session hijacking)
- Verify UI consistency across browsers
- Test special user types (problem_user, visual_user, etc.)
- Document all bugs with severity and steps

Scope:

In-Scope:

- Functional testing (login to checkout)
- UI/UX testing
- Security testing (frontend)
- Cross-browser testing (Chrome, Firefox, Edge)
- Negative and edge case testing

Out-Scope:

- Backend API testing
- Load/Performance testing (except glitch user)
- Payment gateway integration (simulated)
- Mobile native app testing
- Database testing

Test Environment:

Component:

- Processor (Intel i3 or equivalent)
- RAM (4 GB)
- Storage (500 MB free)
- Screen Resolution (1366 x 768 or higher)

Software:

- Operating System (Windows 10 OR >, macOS Ventura, Latest)
- Browser 1 (Google Chrome, 120+)
- Browser 2 (Mozilla Firefox, 120+)
- Browser 3 (Microsoft Edge, 120+)
- Test Management (Excel (Manual), 2021+)

Test Users:

- (All password: `secret\_sauce`)

Username	Purpose
standard_user	Normal positive flow testing
locked_out_user	Negative login testing
problem_user	Image and UI bug detection
performance_glitch_user	Performance/slow loading testing
error_user	Checkout failure testing
visual_user	Layout/alignment testing

Test Scope Details:

Module	Priority	Description
Login	High	Valid/invalid credentials, locked user, XSS/SQL injection
Inventory/Products	High	High Display, sorting, images, data integrity
Product Detail	Medium	Add to cart, back navigation, URL manipulation
Cart Management	High	Add/remove, persistence, reset state

Checkout - Info	High	Field validation, empty fields, special characters
Checkout - Overview	High	Tax calculation (8%), total math, cancel/finish
Menu/Sidebar	Low	Reset app state, logout, about link
Security	High	Direct URL access without login

Test Approach / Strategy:

Testing Levels:

Level	Description	When
Smoke Testing	Top 10 critical test cases	Day 1 - Morning
Functional Testing	All positive flows	Day 1-2
Negative Testing	Invalid data, edge cases	Day 2-3
Security Testing	URL jump, session bypass	Day 3
UI Testing	Layout, alignment, responsive	Day 3
Regression Testing	Re-run failed cases after fixes	Day 4
UAT Simulation	Complete user journeys	Day 5

Test Execution Order:

- Phase 1: Smoke Testing (10 TCs) → PASS mandatory
- Phase 2: Positive Functional (27 TCs)
- Phase 3: Negative Testing (89 TCs)
- Phase 4: Security (12 TCs)
- Phase 5: Visual (8 TCs)
- Phase 6: Regression (Failed TCs only)
- Phase 7: Completion Report

Deliverables:

Risk	Probability	Impact	Mitigation
Website changes during testing	Low	High	Capture screenshots, note version
Browser compatibility issues	Medium	Medium	Test on 3 browsers minimum
Time shortage for 129 TCs	Medium	High	Prioritize high-severity TCs first
special user behaviors not documented	Low	Low	Explore and document while testing

Entry and Exit Criteria:

Entry Criteria:

- Test environment accessible
- Test data ready (usernames/passwords)
- Test cases approved
- Browser(s) installed

Exit Criteria:

- All 129 test cases executed
- 95%+ pass rate for critical modules
- All blocker/critical bugs logged
- Test completion report submitted

Approval:

Role	Name	Signature	Date
Test Lead	ARSLAN SAJID KHAN	ARSLAN	15/01/2026
QA Manager	ARSLAN SAJID KHAN	ARSLAN	15/01/2026
Project Manager	ARSLAN SAJID KHAN	ARSLAN	15/01/2026

Revision History:

Version	Date	Author	Changes
1.0	15/01/2026	ARSLAN SAJID KHAN	Initial draft
2.0	15/01/2026	ARSLAN SAJID KHAN	Added 129 test cases
